

New Mexico Commercial Comprehensive Program **Refrigerated Door Gaskets**

- ✓ **REDUCE ENERGY USE**
- ✓ **REDUCE ENERGY COSTS**

Gaskets are designed to form an air-tight barrier between the cool air inside the refrigerated space and the warmer external environment. Minimizing the entry of warm, moist air will reduce cooling load and energy consumption. Tight-fitting gaskets will also prevent display case fogging and ice build-up around freezer doors.

Available Incentives (\$/linear ft of installed gasket)

Refrigerator Type	\$/Linear Ft
Reach-in or Walk-in Cooler	\$0.08
Reach-in or Walk-in Freezer	\$3.00

Building Types May Include

-  **Supermarkets**
-  **Convenience Stores**
-  **Restaurants**
-  **Refrigerated Warehouses**
